

We Work for You

We are here to help you create a state-of-the-art finance and business operations system that allows you to spend less time on procedural details and more time on your mission.

We are a dynamic team with the expertise and flexibility to design and customize software for your specific needs. Our team brings together decades of experience in education, finance and administration, and software development.

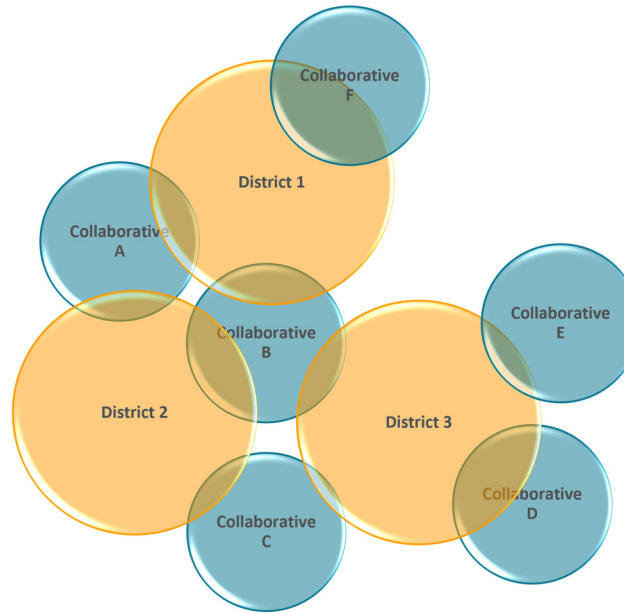

We are thorough, we are nimble, and we are dedicated to meeting your needs.

Together, from idea to implementation.

The SPEDfi Ecosystem

The SPEDfi ecosystem allows special education institutions and school districts to share financial and other information based on four principles:

- ◆ Accuracy
- ◆ Efficiency
- ◆ Transparency
- ◆ Data Privacy & Security

Business Solutions Suite for Special Education Finance & Administration

SPED*fi* has developed and is implementing an integrated business solutions suite to serve the needs of special education institutions and school districts.

Special Education institutions can now take advantage of the power of cloud computing to streamline their operations and automate their invoices' and contracts' generation and revisions. School districts can view the information pertaining to their students who are placed out-of-district.

The complexity of the special education environment and the processes associated with it often require institutions to generate invoices and contracts and revise them more or less manually. These manual processes often enough yield inaccurate information, are fraught with inefficiencies, and pose challenges during financial audits. Similar difficulties are present in the student admission process, the collection of Medicaid reimbursement data, and several other areas.

The issues are compounded by delays in communication from the programmatic departments, where students are served, to the business office, where financial operations are conducted.

SPED*fi* employs modern data integration and automation technologies that bring 21st Century business solutions to the K-12 education space and give executives access to business intelligence needed to keep their institutions financially sound and running smoothly.

Accuracy

Accurate accounting starts with accurate data. Through the use of validation rules, intuitive sections, drop-down menus, and a modern, user-friendly interface SPED*fi* supports the collection of accurate data. Human error is eliminated through the automation of the calculation and, when necessary, recalculation of invoices, compensatory times, and other specific measures.

Efficiency

Data are entered once and are accessed throughout the system by appropriate staff. Each staff member can view or change only the data that pertain to their specific job responsibilities. The need for numerous phone calls and emails is eliminated, including between school districts and out-of-district placements.

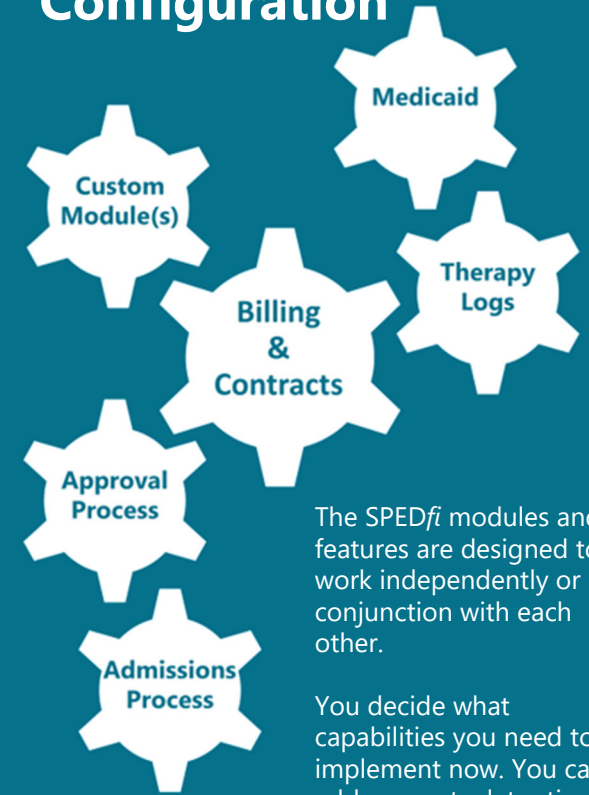

Transparency

All information related to student costs and how they were derived is available to both out-of-district placements and to school districts. Interactions with the system, such as changes to student information, costs, and payments are timestamped. The system provides a fully transparent audit trail.

Data Privacy and Security

Each user only has access to job-related data that pertain to the student information the user has responsibility for. Multifactor authentication, login history, job function-specific profiles, user-specific permissions, and other features provide a secure environment that ensures data privacy.

Modular Configuration

The SPED*fi* modules and features are designed to work independently or in conjunction with each other.

You decide what capabilities you need to implement now. You can add more at a later time.

Real-Time Business Intelligence

Automated reports provide executives with real-time information including:

- ◆ Projected revenue by month; paid & outstanding invoices
- ◆ Number of service hours as per the students' IEPs
- ◆ One-on-one aides FTEs
